Price's Seeds . . . Since 1831 . . .

ONE OF THE OLDEST SEED STORES IN THE U.S.A.

For One Hundred and Seventeen Years **PRICE'S SEED STORE** has served the Market Gardeners and Florists of New York State and the adjoining states, handling the finest quality of seeds. We aim to please and therefore put forth our best efforts.

All our seeds are grown for us by the most competent growers, and the strains without exception are of the highest perfection. They are carefully tested for germination and purity. The germination is marked on every package of **PRICE'S** seeds.

No seeds are sold by us that we do not know are of good vitality and will grow under normal conditions.

ORDER NOW—We Appreciate Early Orders. Orders may be sent at any time and goods will be shipped at the time specified on the order.

USE THE ORDER SHEET, as you will help us by so doing. If you write us a letter, write it on a separate paper, not on the order sheet. If your express or freight office is different from your post office, give both. Please **print** your name and address.

WHEN CASH ACCOMPANIES THE ORDER—we prepay delivery charges to any point in the United States on all flower and vegetable seeds at packet, ounce or pound prices and on all the bulbs purchased at quoted catalog prices.

ACCOUNTS—We would be pleased to open charge accounts for the convenience of our customers. Kindly furnish references.

REMITTANCES—should be made by Money Order, Bank Draft or Registered Letter. We must decline sending goods C.O.D. unless 25% of their value accompanies the order. **If cash or stamps are sent by mail, register the letter.** Make checks payable to **PRICE'S SEED STORE.**

PRICES in this catalog are subject to change without notice.

In small seeds, we supply, unless otherwise specified, $\frac{1}{2}$ ounce at the ounce rate, $\frac{1}{2}$ pound at the pound rate, and, when there are no specific prices for the following, we supply 5 lbs. at the 10-lb. rate, 25 lbs. and over at the 100-lb. rate. In Corn, Peas, and Beans, we supply 25 lbs. and over at the 100-lb. rate.

CONDITIONS OF SALE—We guarantee safe delivery on all our shipments. Price's Seed Store has exercised reasonable precautions in the production and distribution of the seed, but cannot be responsible for the operation of Nature's laws nor govern the conditions under which the crop is grown. Therefore upon the acceptance of this seed, it is mutually agreed that Price's Seed Store gives no warranty, express or implied, as to the productiveness of any seeds, bulbs, plants or roots it sells, and will not be in any way responsible for the crop. Our liability in all instances is limited to the purchase price of the seed.

MATURITY DATES—We assume no responsibility for the accuracy of the number of days allotted to each variety. It should be emphasized it is relative and intended primarily to afford a basis of comparison rather than to state a rigid interval between planting and harvest, which is obviously conditioned by many variable factors. In the case of Cabbage, Cauliflower, Celery, Eggplant, Pepper and Tomato, the maturity dates show time from setting of plants in the field to crop harvest.

It is not possible for you to obtain seeds of purer strains or of higher germination.

Our seeds have had an enviable record for quality since 1831. We have jealously guarded that record and intend to maintain it. We solicit your orders, confident that we can please you.

Maximum Freedom from Weeds—Contains No Crabgrass

Price's Fine Mixed Lawn Grass Seed

The best time to start your lawn, or to repair it, is during the cool weather of early Spring or in early Fall. The weather at these times is favorable for the development of domestic grass but unfavorable for most weeds and wild annual grasses.

SPECIAL (High Grade) Our mixture is especially prepared from the highest quality seeds that can be produced. It makes a smooth, green, velvety lawn with a thick bottom, free from clumps. Only the very best fine-leaved and deep-rooted varieties of the most suitable grasses for making an even, thick mass of sod are used in this mixture. Sure to produce the best results under average conditions of soil and climate.

FOR SHADY AREAS Price's Mixture of Grasses

Shaded lawns are a problem. Mixtures for such locations should consist of varieties which will grow vigorously with little sunlight and in soils deficient in plant food and moisture.

While it is impossible to maintain a permanent lawn in certain shady locations, such as under soft maple trees, we have combined in this mixture certain grasses that are more resistant to these harsh conditions. We recommend this mixture to be especially prepared for shady locations. Sow 1 lb. to 100 square feet (10x10 feet).

RYE GRASS (For Quick Covering). Excellent where a nurse grass is wanted as it will make a quick covering of bright green grass on new lawns and protect the slower germinating permanent kinds. It makes a good growth in a few weeks but will not make a permanent sod. Lb. 40c., 10 lbs. \$2.50

Vegetable Seeds

FOR MARKET GARDENERS

Every successful market grower realizes the tremendous importance quality seeds play in the production of profitable crops. The market gardener who makes his livelihood from the sale of the produce grown cannot afford to sow seeds of doubtful value. He must have highly bred strains carefully selected from vigorous parent plants that show all the typical characteristics of the true variety. They must be full of vigor and vitality to make a sturdy growth from the start. More than three generations of market growers have realized that they can depend on PRICE'S to supply them with the finest in Vegetable Seeds.

Our list of varieties includes the choicest strains of all the best standard sorts but we recommend making thorough trials of the many new varieties because they have proved superior in many sections. Higher yields, better quality, and disease resistance are important factors that distinguish many of the newer varieties.

Asparagus, Mary Washington

ASPARAGUS SEEDS

Sow seed in early Spring in rows 1 1/2 to 2 feet apart, spacing the seed 1 inch apart in the row, and firmly cover with 1 inch of fine soil. Keep free from weeds at all times. A packet will produce about 200 roots, oz., 750; 4 to 5 lbs. to the acre.

MARY WASHINGTON

This variety has proven to be highly rust resistant, hardy and productive. The shoots are long, straight, thick and heavy, dark green the entire length, except tinted darker at the tips. Introduced by Prof. Norton of the United States Department of Agriculture. Our seed is the true strain and will produce the finest large stalks.

Pkt. \$0.10 1/4 lb. \$0.60
Oz.25 Lb. 1.85

Asparagus Roots

Set out in April—Fresh dug—Not cold storage roots

Dig or plow out a trench 15 to 18 inches deep, put in plenty of well-rotted manure, covering it with a few inches of soil, then set the roots 1 1/2 to 2 feet apart and cover with 4 inches of soil. In the Fall, cut off and burn the top growth, plow or throw down the earth and give a good application of stable manure. Early in the Spring fork this in and apply ground animal bone. If White Asparagus is wanted draw earth around the stalks as they grow. Do not continue cutting too long, as this exhausts the plants. 100 roots plant about 15x50 feet, 5,000 to 7,000 will plant an acre.

Washington Rust-Resistant Roots. 2-yr.-old strong plants that will make you a profitable crop second year. *Postpaid*, 100 roots \$4.00, 250 \$6.00
Not prepaid, 500 roots \$11.00, 1000 \$20.00

BROCCOLI

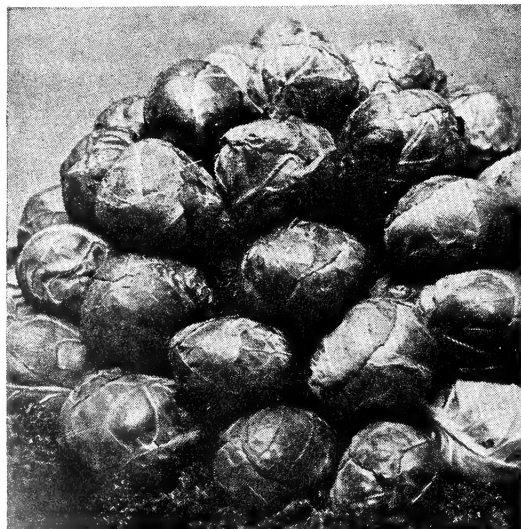

Culture same as for Cauliflower. Italian Broccoli much resembles a green-headed Cauliflower. The true Italian Broccoli produces one head on its main stalk. When this has been cut smaller heads appear, which are also marketed. 1 oz. of seed will produce 2000 plants.

DeCicco. 60 days. Plants medium tall, light green and very productive. Heads cylindrical, compact, many formed on side branches. DeCicco is reported to be especially desirable for quick freezing. The center head should be cut out early.

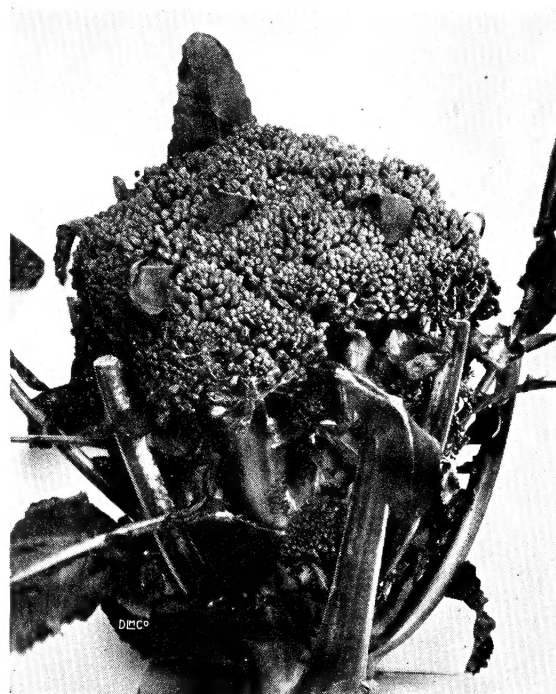

Pkt. 15c., 1/2 oz. 50c., oz. 80c., 1/4 lb. \$2.25, lb. \$7.50

Calabrese (Medium Early). The standard variety in general use, excellent in every way and to be used where earliness is not an important factor. 55-60 days. Pkt. 15c., oz. 50c., 1/4 lb. \$1.50, lb. \$5.00

Di Rapa (Early). For Spring sowing, should be cut before yellow blossoms appear. Pkt. 10c., oz. 30c., 1/4 lb. 80c., lb. \$2.50

Brussels Sprouts

Broccoli Calabrese (Sprouting)

BRUSSELS SPROUTS

The most delicately flavored vegetable of the entire Cabbage family. Plants grow medium tall and produce an abundance of large, solid, dark green, tightly folded "sprouts" or little Cabbage-like heads along the stem. Grow in moderately rich soil to avoid an excess of leaves. Sow seed in May in the open ground. Transplant in rows 3 feet apart and 18 inches apart in the row. When the "sprouts" begin to form at the base of the stalk, break off the lower leaves to give them more room for growth. A packet of seed produces about 300 plants.

1 oz., 3000 plants; 4 to 6 ozs. to plant an acre.

Long Island Strain (A Special Dwarf Selection). This is a fine strain of Sprouts, grown extensively for the New York market, where they bring a good price, especially during the Winter. The plants produce a large crop. 70 days. Pkt. 30c., 1/2 oz. 90c., oz. \$1.50, 1/4 lb. \$4.50, lb. \$16.00

BUSH LIMA

The Bush Lima is more easily grown than the tall, and is earlier and more economical of space but the Pole Limas yield better. Lima Beans require even more heat than other Beans. They should not be planted until the ground is thoroughly warmed. Bush Limas should be sown on good garden soil in 2½ to 3 feet rows, 3 to 6 inches apart, eye down, cover 1 inch. 1 lb. will plant 75 feet, 1 bu. to the acre (60 lbs.) Do not brush against Bean foliage when wet.

FORDHOOK BUSH. 74 days. Outstanding Bush Lima for home or market, producing a very heavy crop with large, flat pods in clusters of from 5 to 8, and contains 3 to 5 thick, meaty, plump beans of excellent flavor. The sturdy, vigorous plants grow 24 to 30 in. high, spread out nearly 2 ft. and stand up well against wind and rain. They begin to bear early and continue to produce for a long time. Because of its earliness, the large size of the Bean, and long bearing season this strain is most popular and it is especially appreciated in sections where the Summers are comparatively short. Fordhook always outsells other Bush Limas.

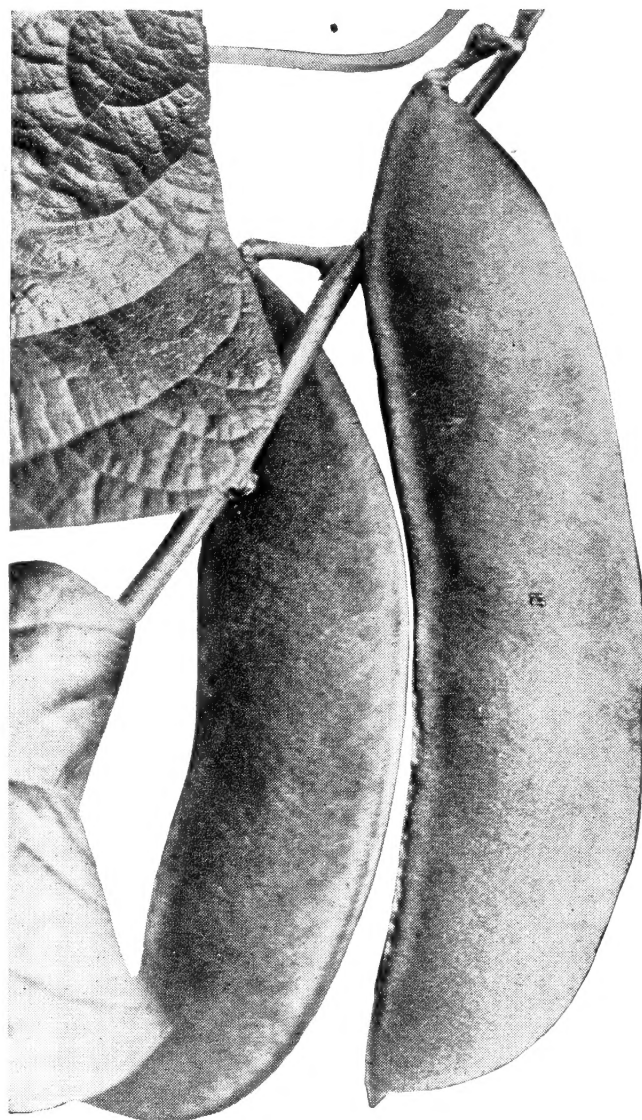

Prepaid: Pkt. 15c., ¼ lb. 20c., ½ lb. 35c., lb. 60c.

The beans are both larger and thicker than the old form and the pods are also larger. Pods 4½ to 5 in. long, 1⅛ in. wide, ⅜ in. thick. Usually contain four large, thick beans.

Prepaid: Pkt. 15c., ¼ lb. 20c., ½ lb. 35c., lb. 60c.

Bean, Fordhook U. S. 242 Bush Lima

New Variety

BUSH LIMA

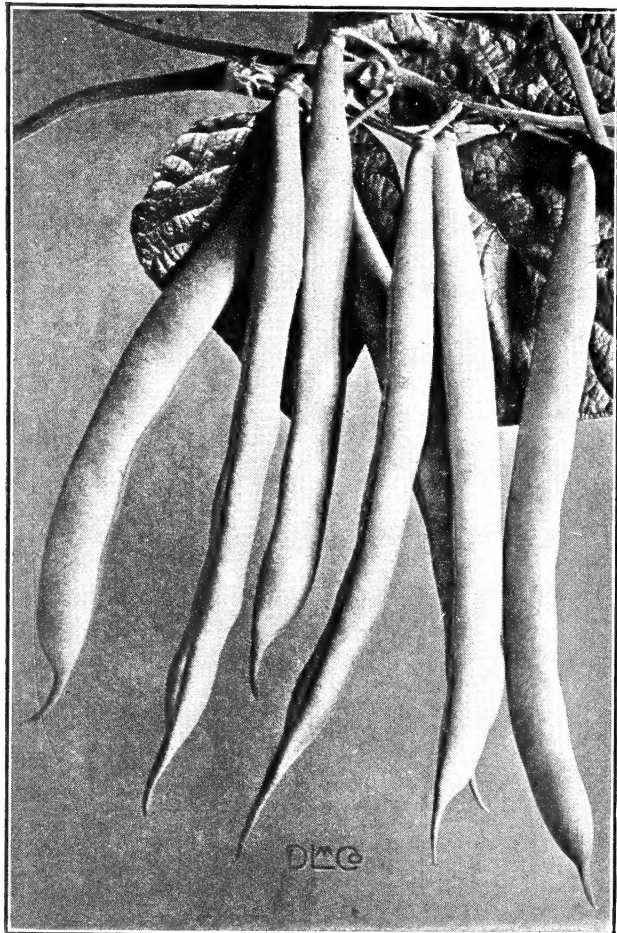

FORDHOOK U. S. 242

This new heavy-yielding strain is a real improvement over the famous Fordhook Bush Lima. Years of careful breeding by the U. S. Dept. of Agriculture at Beltsville, Md. have produced a strain that will consistently out yield Fordhook under average conditions and will produce much better crops in hot dry weather.

The plants are somewhat larger and more vigorous, and they produce a better set of pods on the early pickings. The pods are uniform, nearly straight, and well filled with three or four plump thick beans of the finest types. The dry seeds average slightly smaller and the pods are a trifle narrower but otherwise they are identical to the best Fordhook. In addition they hold their fine uniform size and shape throughout the entire season.

Prepaid: Pkt. 15c., ¼ lb. 20c., ½ lb. 35c., lb. 60c.
Not prepaid: 8 lbs. \$3.44, 15 lbs. \$5.70, 60 lbs. (bu.) \$20.40, 100 lbs. \$34.00

BEANS Yellow-Pod Bush Varieties

Cherokee Wax Bush Bean

Plant seed when all danger of frost is past and the soil is quite warm, in rows 18 to 30 inches apart for hand cultivation, or 2 1/2 to 3 feet apart for field culture. Space the seed 2 to 3 inches apart in the row and cover with 1 to 2 inches of soil. Give frequent and shallow cultivation until blossoms appear. A packet will plant about 25 feet of row; 1 lb., 100 feet; 60 lbs. to an acre. You can make your Bean crop most effective if you plant seed at intervals of two weeks until about 10 weeks before the first frost. In that way you can have plants in full production constantly, providing a steady supply for both table and canning purposes. Remember, Beans have the best flavor when served or canned soon after picking.

PENCIL POD BLACK WAX. Considered without doubt the best round pod Wax Bean both for home use and market. The pods are 6 to 7 in. long, straight, and as round as a pencil. Pods are clear yellow, very brittle, stringless and of finest quality. Matures early and the plant is vigorous and productive. Seed is black. 55 days.

BEETS

Beets should be sown early in the Spring, as soon as the ground can be worked. Successive plantings may be made till the end of July. Beets thrive best in light, loose, deeply worked soil that has been enriched for a previous crop. Smooth roots cannot be grown if fresh manure is used.

The seed should be sown thinly in drills from 1/2 to 1 inch in depth, leaving 12 inches or more between the rows to admit cultivation. When well started,

thin the plants to stand 3 to 4 inches apart in the row. 1 oz. will sow 50 feet of drill, 4 to 6 lbs. are needed per acre in drills.

Our beet seed is grown only from transplanted roots, which are taken up in Fall, carefully graded, stored over the Winter and transplanted again in the Spring. Only Beets which conform to the highest quality standards are planted for seed. Thus improvement is shown annually.

PRICE'S EARLY WONDER. Most popular early bunching Beet. To satisfy critical growers who demand an ideal in shape, color and season, is quite a difficult matter. Ideals vary considerably, but we have pleased a very critical trade with our stock of Early Wonder Beet. The shape is a flattened globe, flesh tender, sweet, and attractive, deep red with very indistinct zones—particularly light zones so undesirable in many stocks; tops small and slender. In season it is about 53 days from seeding to market stage.

Prepaid: Pkt. 10c., oz. 25c., 1/4 lb. 45c., 1/2 lb. 75c., lb. \$1.35

One ounce will produce about 3,000 plants, 4 ozs. will produce enough for an acre.

Our strains are the very best to be had, selected from specimen heads in well rogued fields. Sow seeds of the early varieties in February in hotbeds and transplant the latter part of April or early in May to open ground, or an

early sowing in open ground can be made as soon as weather will permit. Set the plants in rows 3 feet apart and 12 to 18 inches apart in the row. The second early varieties sow in April and transplant in May; late varieties, sow in May and transplant in July, setting plants in rows 3 feet apart and 2 feet in rows. Pkt. 10c., oz. 70c., $\frac{1}{4}$ lb. \$2.15, lb. \$7.00

Golden Acre. 65 days. Matures ahead of Copenhagen Market which it resembles in other respects. The heads are small to medium size, as round as a ball, and very firm. The plant is of dwarf, compact growth, with but few leaves, permitting the plants to be set closely.

It is practically its equal in uniformity and characteristics but does not mature entirely at one time as the Golden Acre. If both were planted on the same date, then by the time the Golden Acre offers 80% to 90% marketable heads, the Improved Copenhagen will have 10% of the heads hard enough to market. In another week 50% more will have reached the marketable state.

CORN, Sweet Hybrid

Hardy—Northern Grown Stocks—High Germination

Sweet or Sugar Corn may be planted when danger of frost is over. Plant 1 inch deep in rows 3 to 4 feet apart and the seeds placed about 8 inches apart in the row, or plant in hills 3 to 4 feet each way with 3 or 4 grains in a hill. Make plantings every two weeks until the middle of July so as to have Corn for use during the entire season. The earliest varieties are ready for the table in 8 to 9 weeks from date of sowing and the late varieties from 10 to 12 weeks. 8 to 12 lbs. to the acre.

SPANCROSS C13.3. This Hybrid has proved to be a money maker for the grower. It is 4 to 5 days earlier than Spancross C 13.4, with larger ears. This strain we offer is a most uniform and attractive stock, and we recommend it highly to growers.

LETTUCE

To grow head Lettuce early, sow the seed in February or March in boxes, flats or in hotbeds in rows. When an inch high, transplant to coldframes. From there set out in the garden as soon as the soil is warm, placing the plants 5 to 7 inches apart in rows while the rows should be 12 to 18 inches apart. Where there is no hotbed, sow seed outside when ground is warm and transplant. For looseleaf or curly-leaved sorts, sow the seed either broadcast or in rows; make sowings every couple of weeks for Lettuce all Summer, and cut as it comes. By sowing in rows the plants can be cultivated. Sow seed the last of August and in September to be transplanted to the coldframe in October. One ounce will sow 300 feet of row, 4 to 5 lbs. for an acre.

ONIONS

This very important vegetable crop requires a rich soil. Seed sowing should be done just as early in the Spring as possible. Sow the seed thinly in drills at least a foot apart, covering to a depth of not more than ½ inch. Tamp down the soil firmly so that it will lie in close contact with seed and thus insure better germination. Frequent cultivation is very necessary as well as occasional applications of fertilizer. One ounce of seed will sow 100 feet of drill, from 4 to 5 lbs. to an acre. Onions, according to variety, take from 90 to 120 days from seed to crop.

PEAS

Peas succeed best on rather light rich loams, but will thrive in any good soil that has been deeply plowed or spaded and liberally manured. They dislike an acid soil and if such a condition exists, an application of lime is essential. Make the first sowing just as early in the Spring as the ground is workable—during March if possible.

The dwarf early Peas are sown in rows 2 feet apart, the larger and midseason varieties in rows 3 feet apart and the tall varieties in rows 4 feet apart, the seed should be covered about 2 inches and the plants thinned to 2 inches apart in the row.

2 lbs. of Peas will sow 100 feet of drill, 120 lbs. to an acre

RADISHES

Radishes must grow quickly to be good, especially the small early sorts. The soil should therefore be thoroughly prepared. Start to sow right after frost is gone, at intervals of 10 days or so to insure a constant supply. Thin to 24 plants to the foot. If crowded, they run to leaves without making roots. Many gardeners sow the early sorts in the rows of slow-growing crops. The Summer and Winter varieties should be thinned to six to the foot; Winter varieties should not be sown until August. One ounce will sow 100 feet of row, 8 lbs. will sow an acre in drills, 12 lbs. broadcast. Our Radish Seed is strictly of the finest grade, being grown from carefully selected and transplanted roots.

PRICE'S SCARLET GLOBE (Special Strain) (Medium Top). 21 days. Globe-shape, exceptionally fine, bright scarlet color. This stock starts fast and bulbs 2 to 3 days earlier than other stocks that we know of. We consider this an outstanding strain of Scarlet Globe. Proven seed stock produced each year from carefully selected and transplanted roots is the basis of our field plantings of the principal varieties. Northern grown Radish leads in quality and our stocks, bred for the critical market garden trade and reproduced in well isolated fields are second to none. Screened seed. Pkt. 10c., oz. 15c., ¼ lb. 35c., lb. \$1.10, 5 lbs. \$5.25, 10 lbs. \$10.50, 25 lbs. \$25.00, 100 lbs. \$100.00

TOMATO

Sow the seed in February or March in a hotbed, greenhouse or in shallow boxes in the house. When plants are about 2 inches high, transplant to 4 inches apart. Transplant in the open ground after all danger of frost is past, 3 to 4 feet apart each way. Cultivate frequently. When plant has reached a height of 5 feet, cut off the top. When three or four clusters of fruit have formed and some of the fruit is as large as a silver dollar, prune the leaves at the base one-half. This hastens ripening. Once a month apply sheep manure around each plant. One ounce will produce 2,000 to 3,000 plants, 2 to 3 ounces for an acre; 35 to 40 plants to 100 feet of row.

Nothing can equal this for lawns, plants, and gardens, as it is the strongest of all natural manures, chemical analysis showing it to contain a higher per cent of fertilizing ingredients—ammonia, phosphoric acid and potash—than in any animal fertilizer in use. It is sterilized to kill all foul seeds and ground fine. It is clean, easily and quickly applied, has no unpleasant odor, will not kill or burn the grass like the commercial fertilizers, will not sow a crop of noxious weeds for you like barnyard or stable manure to fill your lawns. It is immediate in its effect and lasting.
